

Vertiv™ Wall Mount Swing & Swing Deep

Standard swing frames

Highlights

The Vertiv™ Wall Mount Swing Series offers a space-efficient, wall-mounted solution designed for quick equipment access and simplified servicing. The swing-frame design allows the entire rack to pivot away from the wall, providing full rear access to equipment and cabling—ideal for installations where flexibility and accessibility are critical. Available in standard-depth (SR) and deep-depth (SRD) configurations, both models feature a durable steel frame, open architecture for airflow, and multiple mounting points for cable management and accessories.

Vertiv™ Wall Mount Swing

Vertiv™ Wall Mount Swing Deep

Typical applications

Built for flexibility in compact network and telecom spaces.

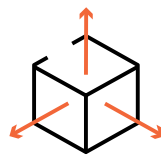

Ideal for:

- Network and telecom closets requiring full rear equipment access
- AV, security, or communication systems where quick servicing is needed
- Edge and branch installations with limited floor space
- Structured cabling setups that benefit from swing-out access for terminations and patching

Swing-frame access

pivoting design provides complete rear access for easy cable management and maintenance

Two depth options

available as SR (standard depth) or SRD (deep depth) to support a variety of equipment sizes and densities

Open, durable design

sturdy steel frame promotes airflow and visibility while maintaining a clean, professional appearance
